

Welcome to CoderDojo Carlton!

CoderDojo organizes free coding workshops (called Dojo's) for children of all genders from 7 to 17 years old. A Dojo is entirely prepared and led by volunteers.

There will be mentors in the session and we are here to help if you get stuck! If you have any questions or are having trouble getting set up, just seek out one of us wearing a mentor badge, or put up your hand and we'll come over.

CoderDojo **requires parents to sit beside their children during the session.** All children are under the care of their parents during this time and mentors are here to provide assistance with any coding or computer issues you're having. You will see your kid/s making progress and can provide help and encouragement along the way.

Children are free to explore their coding interests. We have a number of Activity Sheets available depending on skill level and whether they're interested in learning to code, web development, gaming etc. We'll get your kid/s set up with a new or existing Activity at the beginning of the session, which can be checked off as each task is completed.

Setting up a computer and/or robot for coding can be challenging at times! Even experienced software developers often run into issues in setting up their development environment. Sometimes a bit of troubleshooting is needed to get things up and running, so please don't be discouraged if things take a bit of time to set up! Again, mentors are here to help.

Thank you for being part of the coding community.
We hope you and your kid/s have a great time at CoderDojo Carlton!

-Carlton CoderDojo Team
